

# ***DYING TO BE AN ORGAN DONOR?***

**THE SLOW, EXCRUCIATINGLY PAINFUL PROCEDURE OF BEING DISSECTED TO DEATH! Despite the flowery brochures, the wonderful stories, the 'perceived' popularity and the hype—the TRUTH is ugly, dark and wicked. Organ transplant teams can't use organs from DEAD people.**

**The DONOR IS ALIVE!**

**MY SON'S REAL DEATH TOOK PLACE 19 HOURS AFTER BEING DEHUMANIZED, CALLED A "BRAIN DEAD" DONOR, PRONOUNCED DEAD (FOR LEGAL REASONS ONLY) 26 ½ HOURS AFTER BEING ADMITTED TO THE HOSPITAL:**

- **He was strapped down to the operating table**
- **He was given Isflurane and Zemulon—a pain medication and a paralyzing agent to prevent him from moving**
- **Halfway through this living dissection the pain medication was withdrawn.**
- **An incision was made cutting him from the throat to the groin**
- **A saw was used to cut through the rib cage**
- **The skin was pulled back and an ice cold perfusion irrigated the organs**
- **His blood was drawn off and an ice cold solution put into his veins**
- **All of the organs were exposed while the heart continued to beat**
- **While preparing to cut out the organs, one at a time, the heart continued to beat. The ventilator and monitor also continued to observe his vital signs—OF LIFE**

- Teams of transplant doctors came and cut out the selected organs
- His beating heart was cut out
- Once the VITAL ORGANS had been cut-out, only then did DEATH—*REAL DEATH* take place
- This demonic vigil took 3 ½ hours.
- The reason why pain medication is not given to the donor is twofold: 1) the transplant doctors obviously couldn't care less about the donor being in pain 2) pain medication restricts oxygen in the blood—the transplant team wants lots of oxygen going to the organs.
- A CORPSE IS A HUMAN BODY WITHOUT RESPIRATION, HEART BEAT AND CIRCULATION. THE BODY IS PASTY WHITE IN COLOR, BEGINS TO STIFFEN, AND IS COLD—THIS IS DEATH.
- BEING AN ORGAN DONOR WILL, IN FACT, EVENTUALLY CAUSE DEATH. BUT NOT UNTIL TRANSPLANT SURGEONS HAVE CUT OUT YOUR ORGANS WILL YOU *TRULY BE DEAD*. THESE ARE FRESH VITAL ORGANS FROM A PERSON WHO'S LIVING, BREATHING, HAS A BEATING HEART, CIRCULATING BLOOD, AND CAPABLE OF FEELING PAIN AND FEAR - the LIVING DONOR!

**Still want to be an organ donor?**

It is well documented that IT IS NECESSARY TO PARALYZE ALL DONORS PRIOR TO LIVING DISSECTION! The MOVEMENT OF THE DONOR—THE SQUIRMING ABOUT IN PAIN AND ANGUISH is stopped. MOST DONORS DO NOT RECEIVE PAIN MEDICATION. All signs of the donor's life are ignored.

This isn't about the donor, you know—it's not about protecting and preserving the donor's life. Want to be a donor? Better request pain medication before they dissect you to DEATH!

By the way,  
**This is "The Gift of Life"**
